

## REMARKS

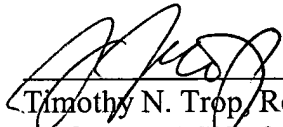

In new claim 25, two different players of an electronic game can play the same game at the same time with different displayed images. The system may be implemented by using tags which distinguish data intended for one or the other of the game players. Likewise, tags from the game players can be utilized to separate out commands.

The concept of providing different images to allow players of the same game, at the same time, to see different things is nowhere suggested in the cited reference.

Therefore, reconsideration is respectfully requested.

Respectfully submitted,

Date: December 3, 2007
